Important information about cost basis for compensatory options

Beginning with securities acquired in 2014, brokers are required to report the cost basis of shares acquired through a compensatory stock option as the amount paid for the shares (the exercise price) only. Cost basis reported on this Form 1099-B does not include compensation income that may have been reported on your Form W-2. See your Stock Plan Transactions Supplement for adjusted cost basis information. You may need to adjust basis on Form 8949 (code B).
